

ELEVATOR CONSTRUCTOR

Nature of the Work

An elevator constructor has a lot of ups and downs. One minute you're on top of the building. The next thing you know, you're down in the basement. But elevator constructors take the highs and lows in stride. After all, it's their job. Elevator constructors install and maintain elevators, escalators, dumbwaiters, wheelchair lifts, and moving walkways. Often, we take for granted the machinery that moves us effortlessly from one place to another, and yet elevators, escalators, dumbwaiters and moving sidewalks have made our lives much easier and more efficient. Elevator constructors work on all kinds of elevators, from simple passenger elevators and on enormous and complex industrial elevators. They install and maintain single escalators that move passengers from one floor of a building to another as well as whole systems of elevators and escalators that keep commuters flowing through the subway. Elevator constructors may specialize in construction, maintenance or repair work.

Working Conditions

Elevator constructors work indoors most of the time, but may do also outdoor work side. They usually work ten hours a day, Monday through Thursday on construction jobs. They work eight hours a day on modernization, repair and maintenance work. Maintenance and service personnel may be on 24-hour call for specified periods of time.

Interest and Personal Qualities

Elevator installers lift and carry heavy equipment and parts, and may work in cramped spaces or awkward positions. Potential hazards include falls, electrical shock, muscle strains, and other injuries related to handling heavy equipment. Because most of their work is performed indoors in buildings under construction or in existing buildings, elevator installers and repairers lose less work time due to inclement weather than do other construction trades workers.

General Qualifications

- Age 18 or older
- Mechanical aptitude
- The ability to work well in a small crew without direct supervision
- The ability to do detailed and precise work
- A willingness to keep up to date with innovations in the field
